Faithfully yours

Sedgwick

Sedgwick

Jun: Coll: Tuesday Morn.

My Dear Sir.

Before I received your last letter, I had, at Mr Macchison's request, sent back without abstract of my paper. It was directed to Mr. Macchison at the Zoological rooms and was contained in a small parcel. I hope it arrived safe. About the same time I received a letter of drawings from Mr. Selby which came to a much less sum than I expected. I will endeavour to follow them & mine and take the Specimens with me to Paris. In a day or two letters have been dispatched by me to the north both in order that I may visit Paris in hopes they might bring more fish into the meshes of the Zoological Society: but I have had no answers yet.

If any small packing can comes to the Geological Society directed to me. Pray take a peep at it, and if it smells of fish send me word. but keep it till I arrive. Or perhaps you will have the kindness to send them to Schaf to keep company till the other part of St Antony's congregation. ——— I have been during a few days of leisure (while I was almost confined to my room by a bad cold) employed in drawing out a sketch of the Island as seen by my eye and the 1st part of my Tweed paper; and have put it in such a state that it may be read. If the Society is in want of papers I will send it up directly. In order that you may be able to inform the Council what this part is, I must tell you that my Paper is in 3 parts. The first Contains. Introductory matter; a description of the external appearance of the country, & Mr. Lonsdale's distribution, given in very great detail; [I dare

this portion may be abridged in reading; otherwise it will suffocate the Soc.y at the outset]; a description of sixteen sections — and four of which are drawn in Smith's map; Lastly the gratulations of Mr Lonsdale to the coal masters — giving an abstract of a series of observations commencing at Notting ham and ending in Northumberland. The last portion is, I flatter myself, of some value, as it puts the thing in its true light. And the Society is bound to make some amends after the erroneous views it propagated in Mr Lonsdale's paper — As this part, as I said before, gives a state to be read. I refer to one or two sections which will appear with the 2d Part. The 2d Part will contain an account of the formation, its divisions, fossils &c &c. The 3rd and last part will contain a series of sections partly intended as proofs of what was said in the 2d part; a description of some remarkable faults; a description of the valleys of denudation; and a synopsis of the whole ——— Can the printing be done in two days or three and bring me down in proof by Saturday next

P.S. Dont suppose that I want to hurry the present

part off my Lands. It would perhaps be more convenient to me to keep it till I can finish the second part. I may make the offer if it be considered more convenient. I have heard we complain of want of Lapwo: but not so much this part of the

Cambridge May 1
1871

Dear Sir

The opening of May-day was so cold & tempestuous that I was prevented from meeting a party of friends at my Museum. But the sun has appeared since then, & tempted me to walk to my Museum; & while there my Assistant Keeper showed me a capital flint implement from one of the celebrated localities in the North of France which you had kindly sent for our small collection. You had, before, given us an ample return for the small gift; & this rather rare form was prized; and this addition will give a new interest to our Stock

In behalf of the University of Sydney
thank you for this very telling specimen,
& your name shall be entered on
our catalogue with due honour.
The infirmity of old age & the great
irritability of my sight very often
compels me to write by the help
of an amanuensis: but I rejoice
to employ a few bright minutes of
the first of many in writing this little
note to thank you & wishing you all
pleasant vigorants of the Advancing
season I remain

Gratefully & truly yours
H Sedgwick

Dear Si

I have just returned
on a visit from Yourself & the
Oct 25. It was great sport
as I was starting to lecture
room & I had only time to
send you a verbal answer
I hope you did not think
this uncourteous, & I am
sure I did not mean the
uncourteous - You note
was mis laid, & I forgot all
about it. During to part of the

Ever

was I will, I sent the 4th
of this month Lan. but am so
stupified by a cold that I
can. Lady answer any
of my letters before this week
began. I shall be happy to
see or any of your friends
at my Lectures, if it plan
to [illegible] [illegible]
[illegible] day; I am

Dear Sir
Very Respectfully Yours

Dear Sir

This is Sunday
Morning: but I think it no
violation of the duties of this
holy day to write to you
(by very early candle light) a
letter of thanks, for your Dis-
-course, & to apologize for
not having sent my thanks
sooner. I have not as yet
perused. I put your Discourse
away, among pamphlets & read
publications, as a study,
table-fully standing & thank
you for it. after I had read
it. I did read it, last

DSI

I fear that I forgot my thanks
and I now send them with
all sincerity, tho' far too
late — I must throw myself
on your kindness & hope that
you will receive them. As
I am not a Hebrew scholar I
have no right to offer any opinion
on the critical part of
your Discourse — The Astron-
-omical part does not
satisfy me: but I know well
that the subject is involved
in great difficulties; & I am
certain that you have
written in a truth loving
spirit with which I hope

to be in sympathy as long as
I live. Poor Hugh Miller
(who has disappeared so
prematurely) published
about two years since an
address he had delivered (I
think in Exeter Hall) on the
subject of the Mosaic Day
I dare say you have read
it — It is such a worthy
& — & not it is such a worthy
& — & not it is such a worthy
your Journal. My wife
& sister desire kind
regards, & I must put on a
surplice & go
to morning chapel. I am
Dear Sir
Yours truly & gratefully
Adelaide K

Dear Sir

Your letter surprised me
as Mr Scan expect. I
never ordered Dr Lloyd work
of Lunault. Neither at Paris
for 5 £ as since I bought
a certain number of the
Lucubrations of Dr Lloyd
himself. Since the work
has been printed I have
not time to time
[illegible] the work that was
Lucid. & of course I do the
— and that we transmit to
Dan

will ascertain perfectly as
to Lloyd's agent. As far as
regards this work, could
I depend to be regulated
by it yourself. I am
with anxious that you
should not be put to an
other expense or by acct
and if you had stated that
you have given down to one
no mistake could have
occurred. I do not want to
blame for it. Unfor-
tunately I have mislaid
your last bill. Prepare
it by the Post and I will
discharge it. But in that
case you must take

can that the printed
be rectified. or perhaps
it will be better to tell the
Paris Bookseller to send
the new Numbers as it
comes out. I mean to procure
Paris. I am to procure
them for myself.

Yours truly
A Hedgwick.

Trin Coll: Wednesday
Nov.? ——— March 1833

Dear Mr Forsyth

My debt of obedient standing
is owing to Captain Forsyth whom I
have not met Marked for Canadian
Transactions, or for his information about
the state of the Club & the Loves thy
Lan. Done me. in thinking of the Loves
/ and some of its consequences I am known
ready to cry out with Cardinal Wolsey.
"A load would sink a navy! too much honour:
"O! 'tis a burden, Cromwell, 'tis a burden,
"Too heavy for a man who has not a gizzard".
In short the Club almost ~~almost~~ made
me put off the mortal coil by this
first outing. It was a fulsome thing let loose
I recovered from the stimulating effects of
it. To bring a pair of my cold phlegmatic
temperament among such ardent spirits

is like taking a water newt among a set of Salamanders. But no matter I am now ready with a shawl of any description. Before I go to Bedford I will take stimulant for a month by way of preparation & then I shall be myself. I shall be on watch for them.

Ammonites and Nautilites are not rare in the secondary strata: but of the finest varieties of every I can say nothing without more information. to know fossils as I take mine you know bones — by looking at their articles. Your gloves are however of a good modern formation, tho' they have some V grain; but I will keep them for your sake!

I have forwarded de la Beche's table of strata to you. I hope you will do me the favor to accept. I have also enclosed a Fabliau of 12 Engravings after the newest pattern of a French petticoat for 12 Mother Earths. She will find herself so smart that I fear the lady pickle grows conceited in her old age. But the fault is entirely mine. I had nothing to do with the cut of the said petticoat; & you may copy the pattern on your large board if it seems good unto you. After you have done with it, have the kindness to put it aside for me. It is a presentation copy and belongs to another work by the same author & I therefore ought not to give it away — even to a Lady who sends me gloves. What a shameful thing to write so bad a hand to a Lady! I never thought about it till it was too late. Do me the honor to accept a copy of my speeches — they are the most readable things I have published. What then must be the condition of the heart readable? After all, as to anything I have written, 'tis only a question between brick-dust & sawdust. A drop of water may however be sent in good will & wide taken. As soon as I can find time I will look out for some fossils for your juvenile cabinets & I will at the same time return the Canadian transactions

to the Captain. when you next write, if I understand
again how the Lord of a Act from Gen,
which I very little deserve after writing as to
had a hand - pray past down the names
of your children for dear to remember. For the
present give my best Love to all of the children
me

Most tenderly & dearly

DSI

292. Sedgwick (Adam, *geologist*, 1785-1873) Two for £2
Two letters, 5 pp., to Rev. W. Robinson, from Trin. Coll., Cambridge, 1855 & 1856.

MATHEWS - 6 ✓

surprises the numerous tiny figures most of whom are in a bright shaft of light on the edge of an ivy-covered bank: they are stealing hazel-nuts. Some figures are nearly 6 inches high, the smallest about one inch. There is a fascinating variety of face & body. The left edge of the picture shows
